

# Varden Kit Add-ons

Steps and components to combine multiple Varden Kits to create a  
BIGGER Vertical Garden

## How to combine Varden kits in standard configurations such as 4' wide by 3' tall, 6' tall by 2' wide, or 4' wide by 6' tall.

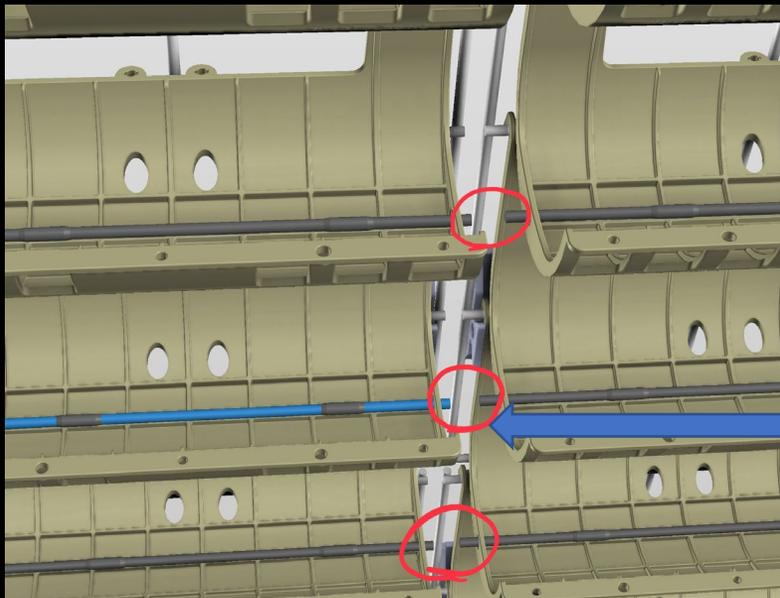

### Accessory pack includes all components to create a 6' tall x 4' wide Varden:

(less parts needed for other configurations)

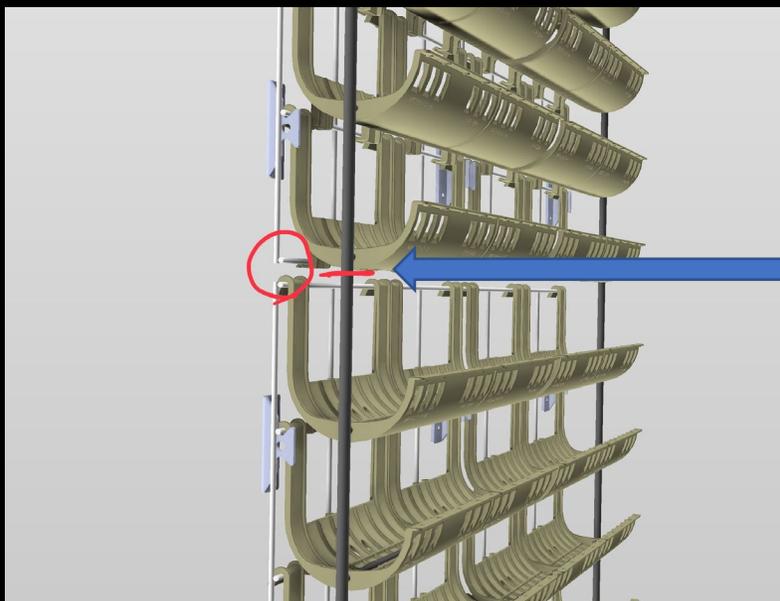

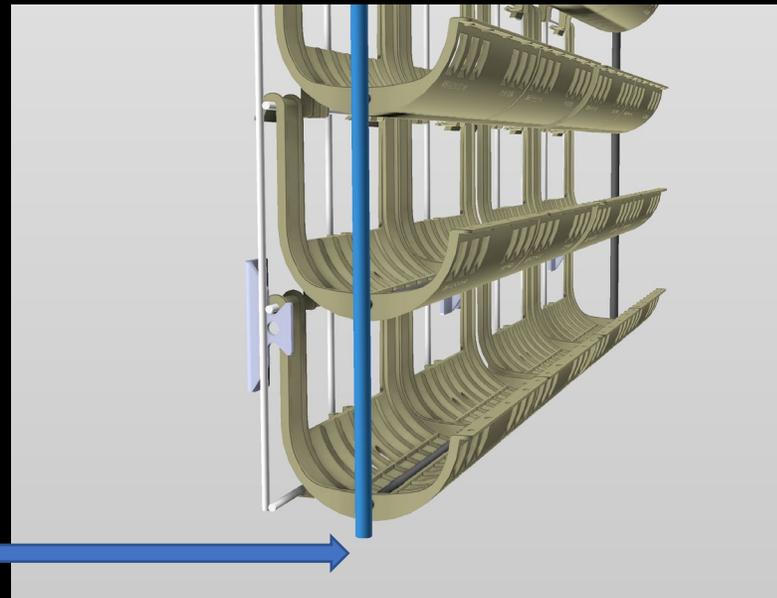

- ❑ Set up each kit as a stand-alone unit but push them as close as possible to the adjoining units in the configuration desired.
- ❑ Keep supply lines as they are and run from the outside edge on both sides with the drip lines heading towards the middle of the system.
- ❑ Where the drip lines have excess ends in the middle of the larger system, cut the end caps off and connect the lines with a single **¼" dripline connector**.
- ❑ In the case of a 6' tall system, it will require (12) ¼" dripline connector fittings.
- ❑ Select which side the water input is going to come from and leave the hose fitting on that side. On the opposite side, cut off the hose fitting and install (1) **½" supply end plug** on the bottom of the line.
- ❑ Where the upper 2 wire panels meets the lower 2 wire panels, the half inch supply line will need to be cut on each side and they will need to be connected using the (2) **½" supply connectors** with one on each side.
- ❑ Smaller combined systems will follow same steps but require less of the fittings.

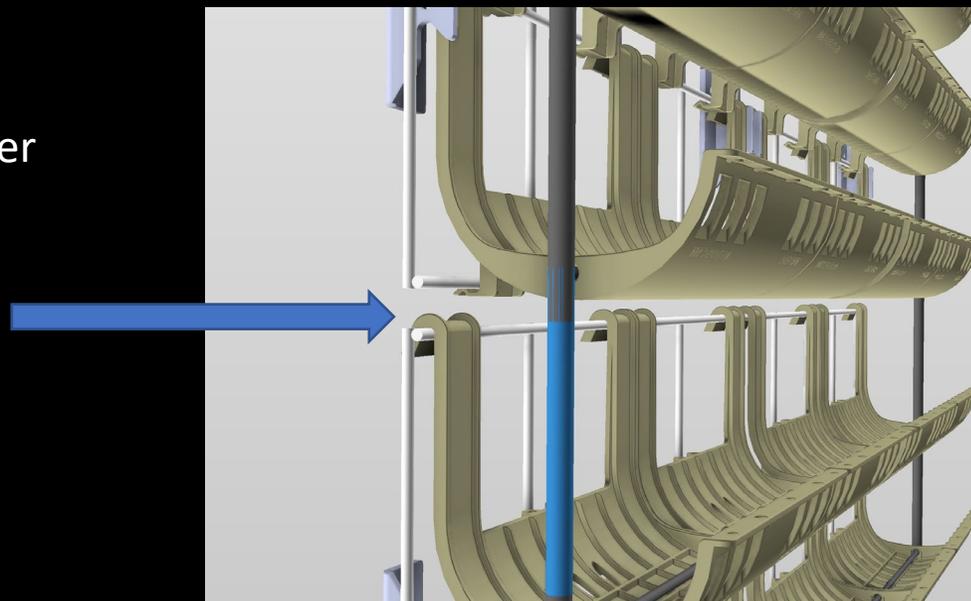

Cut off end  $\frac{1}{4}$ " end caps and connect using the  $\frac{1}{4}$ " connector fittings

Select the supply side to cap and cut off the hose fitting and replace with the  $\frac{1}{2}$ " end plug fitting

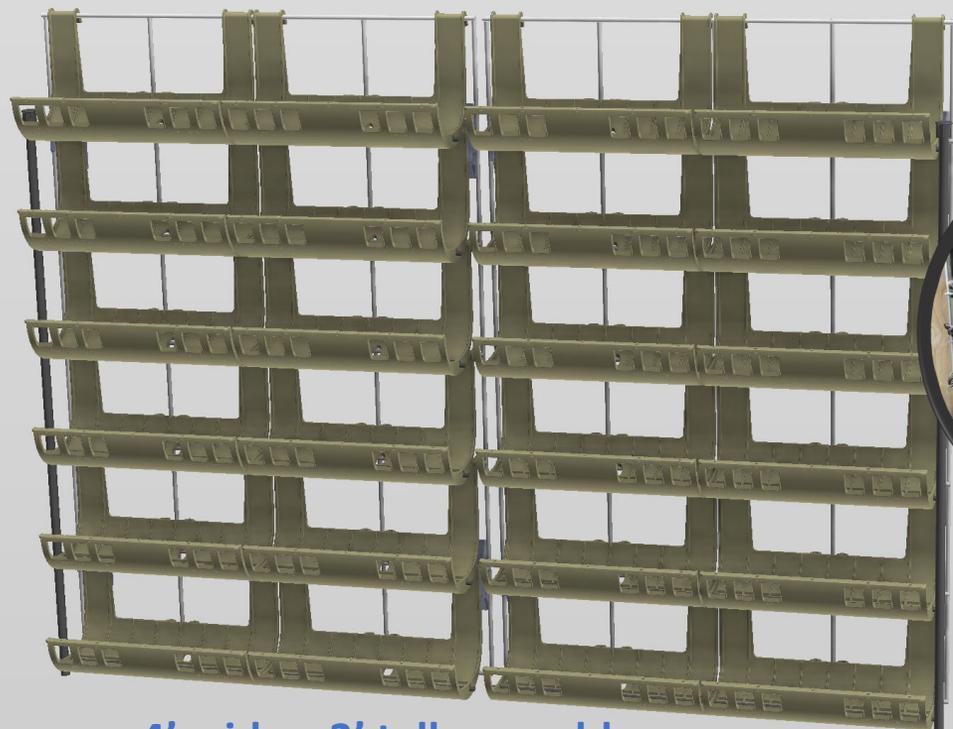

At the junction of the upper and lower kits, cut off the hose fittings and the end caps. Then connect the supply lines on both sides with the supplied  $\frac{1}{2}$ " connector fittings
